

DEFENSE LOGISTICS AGENCY

AMERICA'S COMBAT LOGISTICS SUPPORT AGENCY

(Aged) Approved MILSTRAP Change Letter (AMCL) 3 SCC W (Unserviceable (Warranted Repairable) Withdraw or Implement?

Defense Logistics Management Standards
Office

Supply PRC Meeting 15-1

April 29-30, 2015

- **AMCL 3 Concept**

- Establish SCC W-Warranty to provide a means to identify, segregate, and control unserviceable warranted assets

- **AMCL 3 Rationale**

- Although materiel receipt procedures require the identification and classification of unserviceable (reparable) returns, no method in place to segregate unserviceable warranty returns from other unserviceable returns for a single NSN. If assets under warranty are co-located with assets not under warranty, expeditious induction of warranted items for maintenance cannot be accomplished

• Major Shortcomings:

- The proposed change was written and staffed in 1987, prior to Defense Management Report Decision 902, Consolidation of Defense Supply Depots
- Procedures for identifying which unserviceable assets were under contract warranty are not identified; it was left up the Services and Agencies to develop their own guidance for identifying and classifying as SCC W those unserviceable returns which remain under contract warranty:

“Requires the Services/Agencies to develop procedures for users and wholesale storage activities to determine if unserviceable returns are still under warranty and to assign SCC W to such materiel.”

AMCL 3 Status

- **Published as an approved change on March 16, 1990**
- **Components unable to meet initial 1993-1995 implementation dates due to a shift in resources to the Corporate Information Management (CIM) standard system effort**
- **1997 - With the demise of the CIM effort, DLMSO issued a Request for Revised Implementation Date for AMCL 3**
- **No implementation date was established**
- **Cannot implement without DOD procedures**

Current Warranty Requirements

- **DFARS 246.710 requires DoD Components to begin collecting specific warranty information.**
- **DoD in initial phase to track warranties for items serialized with a Unique Item Identifier (UII)**
- **Vendor submission tracked via WAWF eBusiness Suite (iRAPT submission and IUID Registry)**
 - **Advance shipment notice identifies applicability**
 - **Schema format captures UII, warranty dates, location for return**
 - **IUID Registry populates Warranty Flag**
- **Product Data Reporting and Evaluation Program (PDREP) collects warranty data and repair sources**
 - **Allows users to search for warranty data**

AMCL 3 Way Ahead

- Recommend AMCL 3 be withdrawn
 - AMCL 3 has been in limbo since 1990 (a quarter of a century)
 - Cannot implement SCC W without procedures
- Make a fresh start
 - If a SCC is deemed the appropriate method to identify Warranty items, a new PDC can be submitted, to include the DOD-level procedures for use of the SCC and how warranty materiel is identified for assignment of the SCC
 - Requires OSD DPAP/SCI input for consistency with current policy and development of appropriate implementing procedures
 - For example, use SCC W on Component in Accountable Property System of Record (APSR) for materiel returned for repair under contract warranty

- **Reserve SCC W for Warranty for a limited time, to allow time for submission of a new proposal**
 - Identify in MILSTRAP and DLMS Data Dictionary that SCC W is reserved for Warranty until 31 DEC 2015, pending receipt of PDC. If no PDC received by that time, SCC W will be reserved for future DOD assignment.

BACKUP

• AMCL 3 Interface Requirements

- **Required developing interface between the wholesale owner/ manager activity's quality assurance, inventory accountability, and financial functions and processes to establish positive intransit controls for returns of unserviceable warranted assets.**
- **Requires publication of the Logistics Reassignment policy for SCC as provided by DODM 4140.26, Defense Integrated Materiel Management for Consumable Items and DODM 4140.68, Integrated Materiel Management of Nonconsumable Items, **respectively.****

• AMCL 3 Impact

- **Revised Service/Agency wholesale and retail implementing procedures:**
 - ✓ **Users and receiving wholesale storage activities to classify unserviceable items and components remaining under warranty to the new SCC W**
 - ✓ **Wholesale owner/manager to control SCC W materiel being returned from users, to include establish supply due-in and appropriate financial control records and provide pre-positioned materiel receipts to the wholesale storage activity**
 - ✓ **Requires the Services/Agencies to develop procedures for users and wholesale storage activities to determine if unserviceable returns are still under warranty and to assign SCC W to such materiel. (AMCL 3 did not address how to identify whether items are under warranty)**
 - ✓ **Requires modification of Service/Agency wholesale and retail processing systems to recognize the new supply**
